Quote:It will break when iproute2 is installed
Well, ip command accepts dev argument. Or is there something in iproute2 networking module that adds dev automatically?

Still, the final question is: how do we make it work? We have added 'dev venet0' argument because of the bug in baselayout (and baselayout-vserver), now baselayout will be fixed and we will again change the poor script to remove 'dev venet0'. Looks like no way to fix it so it will work in all cases, with all (recent) baselayouts.

This is bad.
