Well, we do change syslog in template's post-install scripts to skip klogd startup, but you can undo the changes - just diff syslog init script from a VE and from the normal system.

The idea is "passed klogd skipped $KLOGD_OPTIONS" -> "daemon klogd $KLOGD_OPTIONS", the same for stopping and might be some other pieces of code dealing with klogd in /etc/rc.d/init.d/syslog.
