Hello,

I'am trying to install OpenVZ. I patched the kernel and created a template. If I try to start the VE the following error is given:

```
# vzctl start 777 ...
RTNETLINK answers: No such device
vps-net_add ERROR: Unable to add route /sbin/ip route add 192.168.2.50
dev venet0 src 192.168.2.23
```

Host System Kernel: Etch 2.6.18.5+openvz

etc/vz/conf/777.conf

```
...
OSTEMPLATE=debian-4.0
IP_ADDRESS="192.168.2.50"
NAMESERVER="192.168.2.1"
```

```
# lsmod | grep vz
vznetdev 16704 0
vzmon 40648 1 vznetdev
ipv6 236448 9 vzmon
```

- ifconfig shows no venet0

```
# ip link show venet0
1: venet0: <BROADCAST,POINTTOPOINT,NOARP> mtu 1500 qdisc noop
    link/void
```

Big thanks for Help!

greetings
guen
