Hi Ola...

As embarrassing as this is, I have to admit that I can't figure out how to open a bug report using the link provided below. That's why the report is not filed yet. Also, I experienced a kernel panic with this kernel. Another engineer restarted the system, but because he was accessing via an IPMI card (so no text console) he was unable to copy out the associated information from the kernel. If there is something I can get you from the machine, I'll be happy to do so.

Also, another person I know knows how to open Debian bug reports, but he won't be available until after the Jewish holiday. As soon as I can talk with him I'll open the bug.
