Subject: OpenVZ vs. Other Virtualization? Posted by tiger74 on Sat, 22 Sep 2007 05:08:31 GMT View Forum Message <> Reply to Message

Hello all,

I'm new here. I've just heard OpenVZ from one of my friend and try it. I have been able to set it up, although just so far as setting up apache on it.

I want to know. What is the strong and weak point of OpenVZ against other Virtualization software such as Xen and Vmware?

One thing I notice is that OpenVZ doesn't support guest OS other than Fedora and Centos? Also there's no GUI of the guest OS?

OpenVZ Forum

Thank you for your info.
