Subject: OpenVZ vs. Other Virtualization?

Hello all,
I'm new here. I've just heard OpenVZ from one of my friend and try it. I have been able to set it up, although just so far as setting up apache on it.

I want to know. What is the strong and weak point of OpenVZ against other Virtualization software such as Xen and Vmware?

One thing I notice is that OpenVZ doesn't support guest OS other than Fedora and Centos? Also there's no GUI of the guest OS?

Thank you for your info.
