Subject: Failed Dependencies
Posted by robjones2006 on Fri, 17 Mar 2006 16:00:29 GMT

Hello everyone!

Quick little problem for you to sort out.. I installed OpenVZ kernel on x86_64 (non-smp) AMD64 using VMWARE and FC4 x64 edition.

I boot into the OpenVZ Kernel fine, apart from the usual pcmcia error, login to root etc all fine. I go to install vzctl and get the following failed dependencies.

libvzctl-fs.so()(64bit)
libvzctl.so.0.0.1()(64bit)
vzctl-lib = 3.0.0-2

Any ideas? Looked everywhere but nobody seems to get this error. Perhaps it's because i'm using Vmware? Btw, host OS is Win XP x64.

Cheers,

Rob Jones
