Hi all,

we have several OpenVZ instances (CentOS 4.5) running on several physical servers (CentOS 5.0) as a QA-/testing environment for Java applications running in JBoss application server. Since we do have to test clustering, multicast has to work for all virtual servers, no matter which physical host they run on.

Right now, we use veth interfaces with local IPs (192.168.\*.\*) and tested multicast with ssmping (<http://www.venaas.no/multicast/ssmping/>) without success.

Any idea how to get this running?

Regards,

Peter
