
Subject: [PATCH 3/5] Move the IPC namespace under the option
Posted by [Pavel Emelianov](#) on Wed, 26 Sep 2007 15:51:12 GMT
[View Forum Message](#) <> [Reply to Message](#)

Currently all the IPC namespace management code is in ipc/util.c. I moved this code into ipc/namespace.c file which is compiled out when needed.

The linux/ipc_namespace.h file is used to store the prototypes of the functions in namespace.c and the stubs for NAMESPACES=n case. This is done so, because the stub for copy_ipc_namespace requires the knoweledge of the CLONE_NEWIPC flag, which is in sched.h. But the linux/ipc.h file itself is included into many many .c files via the sys.h->sem.h sequence so adding the sched.h into it will make all these .c depend on sched.h which is not that good. On the other hand the knowledge about the namespaces stuff is required in 4 .c files only.

Besides, this patch compiles out some auxiliary functions from ipc/sem.c, msg.c and shm.c files.

Signied-off-by: Pavel Emelyanov <xemul@openvz.org>
