Hello!

Isn't this one <http://git.kernel.org/?p=linux/kernel/git/stable/linux-2.6.2>

0.y.git;a=commitdiff;h=0d4a39318e6177ed424e92fe9ea75b514e782cdc also related to openvz Kernel? I mean you can get root rights with it in a VPS or as a user on the Host if it is a x64 build.
