Subject: Re: Will development now move to 2.6.16?
Posted by mephisto on Tue, 21 Mar 2006 10:38:15 GMT

2.6.8 never crashed, it didn't even start (could not mount root fs). It was 2.6.15. I have the feeling that it was a memory related problem because people complained that the server was getting slower and slower before beeing not available anymore - yes I'm using the node as a server even though it is not recommended.
