Looking at the GIT tree it looks like 2.6.22-ovz004 was released 4 days ago. That should have the fixes for netfilter, correct? Any idea when it's going to appear on the site? I need 2.6.22 for the TCP_MD5SUM option (for bgp route advertising) and I need ovz004 to get netfilter going.

I've also noticed that CONFIG_IPV6_SIT is not set in the 2.6.22 (or other development) builds. Anyone know if there is some problem there? Yes, I need that too and will probably end up recompiling the kernel just for that - it's default enabled in the EL kernels and Fedora kernels.

Mike
