Hi,

Sorry this not "I can't" but "i don't know"

I find this commande for allocate 128Mo
page = $128 * 1024 * 1024 / 4096$ ---> 32768

```
vzctl set 102 --privvmpages 32768:32768 --oomguarpages 32768:32768 --physpages 32768:32768 --vmguarpages 32768:32768 --save
```

And this for the memory information on the VE
vzctl set 102 --meminfo pages:32768 --save

But on the VE, swap memory as zero

```
102:~# free
```

	total	used	free	shared	buffers	cached
Mem:	65536	13300	52236	0	0	0
-/+ buffers/cache:		13300	52236			
Swap:	0	0	0			

How to allocate swap file?
