---

I have question for using  
Dedicated Server service from Godaddy.  
I like to ask , if I choose a basic  
Dedicated Server , will it be ok to use openVZ?

I read OpenVZ doc, it seems ,it's  
quite straight forward. But I am not sure about  
partionning requirments.

Would you recommend Xen or OpenVZ? I am planning to have  
2 Dedicated Servers, one with Xen and another with OpenVZ.

But I like to start with one after a few months then set up second one to able to have Virtual  
Windows server as well.

Thanks and I appreciate for respond.
