I have question for using
Dedicated Server service from Godaddy.
I like to ask , if I choose a basic
Dedicated Server , will it be ok to use openVZ?
I read OpenVZ doc, it seems ,it's
quite straight forward. But I am not sure about
partionning requirments.
Would you recommend Xen or OpenVZ? I am planning to have
2 Dedicated Servers, one with Xen and another with OpenVZ.
But I like to start with one after a few months then set up second one to able to have Virtual
Windows server as well.

Thanks and I appreciate for respond.
