Subject: Configuring a useless veth

Hi,

I'd need an interface with a MAC address for some application that I run within a VE. I currently use venet as interface:

(in 105.conf)

```
IP_ADDRESS="192.168.2.205"
```

How could I configure a veth device, but not use it? I don't need any of the features of veth, except its MAC address. Everytime I try switching my config to veth, it screws my config and the VE becomes unreachable, I have to restore from a backup.

Regards,  
Ugo
