This is using the

<http://download.openvz.org/kernel/branches/rhel5-2.6.18/028stab045.1/ovzkernel-2.6.18-8.1.14.el5.028stab045.1.i686.rpm>

kernel. It's interesting that amd works for you in the patched vanilla kernel but autofs doesn't. I'm actually very surprised how little traffic this thread has received as NIS/NFS/AutoFS is a very common Linux configuration in the Enterprise.

I hope this can be solved pretty quickly or I might have to revert back to Xen and all it's "pciback" hacks. Blech.

Anyone? HELP!
