jmeyerdo wrote on Sun, 14 October 2007 02:10Hi!
I noticed the same error with an OpenVZ-host today:
[root@vserver104 ~]# /sbin/iptables -I INPUT -p tcp --dport 80 iptables: Unknown error 4294967295

4294967295 = 0xffffffff = -1

Are you sure that you haven't any failcounters in /proc/user_beancounters file?

Then could you please strace this command and attach the logs?

Also it would be usefulto look at Ismod output on your node.

thank you, Vasily Averin
