jmeyerdo wrote on Sun, 14 October 2007 02:10Hi!

I noticed the same error with an OpenVZ-host today:

```
[root@vserver104 ~]# /sbin/iptables -I INPUT -p tcp --dport 80
```

```
iptables: Unknown error 4294967295
```

4294967295 = 0xffffffff = -1

Are you sure that you haven't any failcounters in /proc/user_beancounters file?

Then could you please strace this command and attach the logs?

Also it would be useful to look at lsmmod output on your node.

thank you,

Vasily Averin
