Andrey Mirkin wrote on Wed, 17 October 2007 15:33Hello,

Please try to mount nfs in following way:
1. mount nfs in VE0
2. bind mount it on VE start (use VEID.mount script for this)

 Well this does not look like a good solution, since having all nfs
mounts for all VE in VE0 is not secure not. Can you explain why this is a problem to migrate the
lockd process and if this will or can be fixed in future releases of OpenVZ?
And also why i can't see the lockd process in VE0?

 Thanks
 Alex
