Ian,

just like to any other usual machine using
ssh from your workstation.

1. assign IP address to some VE using
ve0# vzctl set <VEID> --ipadd <VEIP> --save

2. just in case, check that VE is pingable from your workstation:
ws# ping <VEIP>

3. just in case, check that VE is running sshd service:
ve0# vzctl exec <VEID> ps axf | grep sshd

if it is not running sshd then enter to VE using vzctl enter command
and install/start sshd service.

4. don't forget to set root user password
ve0: vzctl set <VEID> --userpasswd root:mypassword

5. now you can login to VE as to usual machine using it's IP

Kirill
