Subject: Re: Slow first ping to any VE IP? It's driving me crazy!

This question is still open. It's apparently so mysterious that nobody knows what the problem is exactly...

Some facts:
---

*) Response to ping from the main hardware node IP and from the gateway is always perfect without the initial delay. Only pinging the VPS IPs from the "outside" shows a delay of roughly 200-800ms on the first ping. The consequent pings are OK.

*) It's possibly caused by ARP cache expiration. One idea is that the hardware node does not store the VPS IPs in the ARP table as permanent. However, the "arp -a" command does show the record *is* indeed permanent, unless I am misinterpreting it.

*) The VPS network settings is the default as set by HyperVM.

As always, any ideas are very welcome!

Tomas
