---

Tried to compile from src with the patch (as I have to compile zaptel drivers for asterisk) and I can not get ipt\_state to compile as a module, even though it shows as =m in the .config file... any ideas?

-UPDATE-

Hmm...looking through the source looks like ipt\_state is depreciated and xt\_state under linux-2.6.16/net/netfilter/xt\_state.c takes it's place....
