2) The" mount" command shows the source of the mount as "nfs" and not the IP address (like what it does on the physical machine shown above. Seems minor but might mean something

[root@dolly-centos5-A /]# df

Filesystem 1K-blocks Used Available Use% Mounted on

simfs 2389512 365772 2023740 16% /

nfs 948779200 103575840 797008192 12% /mnt

It depends on coreutils version.

I also checked 2.6.18-8.1.14.el5.028stab045.1 kernel and it works with nfs+autofs!

Please send me by e-mail detailed your system configuration and I will try to help you.
