so i need 3 gigabyte ethernet cards(one for heartbeat+drbd,1 for primary server and one for the secondary)for each server?

Mysql(or postgresql) apache and php cannot be runned on two server,ho i should configure it?
i know how to configure a failover and active/active configuration but i don't know how to separate the processes between machines with load balancing.

what distro should i use to install OpenVz(domain0)?
