Subject: Re: Howto set static MAC for bridge device?
Posted by piavlo on Sun, 21 Oct 2007 13:54:22 GMT

I found an option to set mac manually with ifconfig
likeifconfig br0 hw ether 00:14:22:75:86:7e
i can add this command to the EXTERNAL_SCRIPT run by /etc/vz/vznet.conf then VE starts up, but there is no
such script then VE is shut down, is there any place
i can put the ifconfig br0 hw ether 00:14:22:75:86:7e
command then any of the VE is shuts down?

 Thanks
