Well, looks like i've no more ideas what to check...

- * might be the content of the /proc/meminfo. Does it differ from the meminfo in working VE?
- * might be strace of the small program which simply does alloc().

But i suppose the copy of the VE will be the simplest way.

BTW, please, tell me which kernel do you use and the host OS. (i think the latter doesn't matter but anyway).
