
Subject: [PATCH] namespaces: introduce sys_hijack (v7)

Posted by [serue](#) on Wed, 24 Oct 2007 22:21:25 GMT

[View Forum Message](#) <> [Reply to Message](#)

This is just a first stab at doing hijack by cgroup files. I force using the 'tasks' file just so that I can (a) predict and check the name of the file, (b) make sure it's a cgroup file, and then (c) trust that taking __d_cont(dentry parent) gives me a legitimate container.

Seems to work at least.

Paul, does this look reasonable? task_from_cgroup_fd() in particular.

thanks,
-serge

Subject: [PATCH] namespaces: introduce sys_hijack (v7)

Move most of do_fork() into a new do_fork_task() which acts on a new argument, task, rather than on current. do_fork() becomes a call to do_fork_task(current, ...).

Introduce sys_hijack (for x86 only so far). It is like clone, but in place of a stack pointer (which is assumed null) it accepts a pid. The process identified by that pid is the one which is actually cloned. Some state - include the file table, the signals and sighand (and hence tty), and the ->parent are taken from the calling process.

A process to be hijacked may be identified by process id. Alternatively, an open fd for a cgroup 'tasks' file may be specified. The first available task in that cgroup will then be hijacked.

In order to hijack a process, the calling process must be allowed to ptrace the target.

The effect is a sort of namespace enter. The following program uses sys_hijack to 'enter' all namespaces of the specified task. For instance in one terminal, do

```
mount -t cgroup -o ns /cgroup
hostname
qemu
```

```
ns_exec -u /bin/sh
hostname serge
echo $$
1073
cat /proc/$$/cgroup
ns:/node_1073
```

In another terminal then do

```
hostname
qemu
cat /proc/$$/cgroup
ns:/
hijack pid 1073
hostname
serge
cat /proc/$$/cgroup
ns:/node_1073
hijack cgroup /cgroup/node_1073/tasks
```

Changelog:

Aug 23: send a stop signal to the hijacked process
(like ptrace does).
Oct 09: Update for 2.6.23-rc8-mm2 (mainly pidns)
Don't take task_lock under rcu_read_lock
Send hijacked process to cgroup_fork() as
the first argument.
Removed some unneeded task_locks.
Oct 16: Fix bug introduced into alloc_pid.
Oct 16: Add 'int which' argument to sys_hijack to
allow later expansion to use cgroup in place
of pid to specify what to hijack.
Oct 24: Implement hijack by open cgroup file.
