---

Is there any HOWTO or readme describing how to create a SUSE Enterprise Server 10 SP1 otemplate? The existing openSUSE 10 otemplate is for a very old SUSE version.

I created a new openSUSE 10 VE and it runs fine. I updated it to 10.1 using YaST Online Update and now "vzctl stop ID" timeouts and is unable to shutdown the VE. Any ideas?

Thanks,

-Svetlin
