Just to clarify, and depending on what kernel you use... but there are some OpenVZ kernels labeled "enterprise" and/or "PAE" which are i386 kernels and they handle more than 4GB of RAM just fine. I have one dual, quad-core machine with 16GB of RAM and all RAM is recognized with the i386 PAE kernel.

I'm not necessarily recommending one kernel over the other though... make your own decision on that.
