Hello,

I'm looking for a solution to efficiently use 2 HNs as 1, and run VZ on top of it. For instance, i am able to get two nodes with following config:

Athlon 64 x2 6000+ 8Gb RAM each

Are there any solutions to use both as one HN ? Some kind of clustering maybe? What i'm trying to achieve is to benefit from those resources as effectively as possible.

Thanks,  
Radu
