
Subject: VE going out with wrong public ip

Hi there.

I know WHY it is happening but I don't know how to solve.

Let's start: I've 6 public ips and let's suppose that:

1.1.1.1 - is the router

1.1.1.2 - is the HN

I have created a VE and assigned a public ip address 1.1.1.3 to this VE. It can receive connections correctly.

When I try to connect from that VE, I go out with 1.1.1.2 address. I think this happens because packets get to HN and then go out by there but...how can I do in order to allow packets to go out with the .3 ip?

Thank you.
