
Subject: [PATCH][NETNS] fix net released by rcu callback
Posted by [Daniel Lezcano](#) on Tue, 30 Oct 2007 10:33:59 GMT
[View Forum Message](#) <> [Reply to Message](#)

When a network namespace reference is held by a network subsystem, and when this reference is decremented in a rcu update callback, we must ensure that there is no more outstanding rcu update before trying to free the network namespace.

In the normal case, the rcu_barrier is called when the network namespace is exiting in the cleanup_net function.

But when a network namespace creation fails, and the subsystems are undone (like the cleanup), the rcu_barrier is missing.

This patch adds the missing rcu_barrier.
