
Subject: [RFC][for -mm] memory cgroup enhancements take3 [7/9] add pre_destory

Posted by [KAMEZAWA Hiroyuki](#) on Tue, 30 Oct 2007 11:20:52 GMT

My main purpose of this patch is for memory controller..

This patch adds a handler "pre_destroy" to cgroup_subsys. It is called before cgroup_rmdir() checks all subsys's refcnt.

I think this is useful for subsyses which have some extra refs even if there are no tasks in cgroup. By adding pre_destroy(), the kernel keeps the rule "destroy() against subsystem is called only when refcnt=0." and allows css's ref to be used by other objects than tasks.
