Subject: Fedora 4 startup error
Posted by NoDed on Mon, 27 Mar 2006 21:14:51 GMT

I installed the lastest stable OpenVZ kernel on a fresh Fedora 4 but when i reboot to boot up with the OpenVZ kernel it throws an error and don't start.

Mar 27 05:53:52 localhost udev[29408]: main: action, subsystem or devpath missing

This is the only error that i can see in the log files, i'm doing this remotely.

Can someone help me ?

Thanks in advance!
