---

This patch adds an interface "memory.force\_empty".

Any write to this file will drop all charges in this cgroup if there is no task under.

```
%echo 1 > /...../memory.force_empty
```

will drop all charges of memory cgroup if cgroup's tasks is empty.

This is useful to invoke rmdir() against memory cgroup successfully.

Tested and worked well on x86\_64/fake-NUMA system.

Changelog v4 -> v5:

- added comments to mem\_cgroup\_force\_empty()
- made mem\_force\_empty\_read return -EINVAL
- cleanup mem\_cgroup\_force\_empty\_list()
- removed SWAP\_CLUSTER\_MAX

Changelog v3 -> v4:

- adjusted to 2.6.23-mm1
- fixed typo
- changes buf[2]="0" to static const

Changelog v2 -> v3:

- changed the name from force\_reclaim to force\_empty.

Changelog v1 -> v2:

- added a new interface force\_reclaim.
- changes spin\_lock to spin\_lock\_irqsave().
