You could try the gentoo stages from here instead:
http://openvz.org/download/template/cache/

Actually try this one!:

  http://www.montanalinux.org/files/gentoo-amd64-20071018.tar. gz
very new, shouuld be on openvz.org at somestage.

Hopefull well see some more gentoo action when baselayout 2 goes stable by I think that last one
is of promise^

I am finding the stage your using pretty bad too you could use some other tested fedora/distro
templates in the mean time too.

but try that link
