Hi Dev,

Thank you very much for help...I have few doubts...

(1) Do the two uptime fields in /proc/vz/vestat denotes same (time since last boot) or different values(if so which values) because I tried to convert each field in file to sec by formulas give in post above..

first uptime in file:

uptime in sec= uptime_in_jiffies/jiffies_per_sec;

second uptime in file:

uptime in sec= uptime_in_cycle/cpu_freq

(cpu_freq is in MHZ..so no need to divide by jiffies_per_sec*jiffies_per_sec...I tried with this also still both values do not match)

the values are not same.

(2) I ran several infinite processes in two different VEs each...still the values of Maxlat, Totlat, Numsched remain 0. Am I doing any mistake?

thanks in advance...
