Ok, I'm stuck.

The port is very easy, but Ip table inside the ve is an issue.

tt's very fast to make the smoothwall template.

I used http://wiki.openvz.org/Physical_to_VE to create the image.

I used the Virtual ethernet devices can be joined in one bridge section from
http://wiki.openvz.org/Veth#Simple_configuration_with_virtua l_ethernet_device to create two
bridges. one green and one red. The HN shared the red bridge with the ve.

The VE has a issue with iptables. I worked with "Re: iptables with nat inside guest",
http://forum.openvz.org/index.php?t=msg&goto=22599&

An Iptables expert is needed for this port.

I'm going to install kvm and run the guest inside the vm. I will post the howto
