xt_state is renamed ipt_state, and I can assign any -m state rule in my VPSs. Could you post more details:

- 1) kernel version (config if custom kernel)
 - 2) cat /etc/sysconfig/vz
 - 3) cat /etc/sysconfig/vz-scripts/<VPSID>.conf
 - 4) lsmod output before VPS start
 - 5) iptables command which fails and it's error output
-
