ok, now i've found a solution.

the conf file `/etc/sysconfig/network-scripts/route-venet0` is not taken into account.

Googling around some says that you have to add your routes into `/etc/sysconfig/static-route` (doesn't work), or in `rc.local` (doesn't work, and btw, an ugly way).

The last clue i found is to add routes in `/etc/sysconfig/networking/${interface}.route`, and it works.

now, i have `/etc/sysconfig/networking/venet0.route`, that contains :

```
NETMASK1=255.255.255.255
```

```
ADRESS1=191.255.255.1
```

hope this would help!
