Hello,

gamtech wrote on Mon, 05 November 2007 20:58I would like to transfer data from one VE to another between HNs over private network. Now if I just add 10.0.0.x addresses to each VE (on different HNs), then request goes trough private network (bond0), but reply trough Internet (eth2). But maybe I mistake and they go completely over eth2.

Let's you have assigned additional private adresses to the VEs:
- VEIP1 for VE1 on HN1
- VEIP2 for VE2 on NH2

Could you please collect the following info?:
1) 'ip a l' on both HNs and VEs
2) 'ip r l' on both HNs
3) 'ip rule l' on both HNs
4) 'ip r get $VEIP1' on the HN2

While pinging VE2 from VE1 run on HN2:
5) 'tcpdump -i bond0 -n ip proto \\icmp and host $VEIP1'
6) 'tcpdump -i eth2 -n ip proto \\icmp and host $VEIP1'

Thank you,
  Konstantin.
