Subject: Can not suspend VE with nfs mounts - even with bind mounts to HN
Posted by piavlo on Tue, 06 Nov 2007 09:02:14 GMT

Since checkpointing does not work then there are nfs mounts inside VE, I've mounted the nfs partition in HN and bind mouted it in VE.
root> cat /etc/vz/conf/102.mount
#!/bin/bash

mount -n --bind /users/staff /vz/root/102/users/staff
exit ${?}
Still gives the error:

root> vzctl chkpnt 102 --suspend
Setting up checkpoint...
    suspend...
Can not suspend VE: Invalid argument
unsupported fs type nfs
Checkpointing failed

The nfs mount is not listed in HN mtab, but is listed in VE102
mtab. And is listed both on HN & VE102 /proc/mounts.
I've tried to remove the nfs mount from VE102 mtab but it did not
help.

So it looks like there is no way to checkpoint or migrate a VE
which acts like an nfs client. Or should it still work with bind mounts?
