IP6T_SO_SET_REPLACE == IPT_SO_SET_REPLACE == XT_SO_SET_REPLACE.

Rename will require respective #include directive rename, so, I just leave

this as it is. BTW, I'll make respective patch for IPV6 in the near future

and this hunk will be removed at all.

compat_mutex is always over xt[af].mutex and can't be taken under the last
one, so, there should be no races.

New patch is attached.

--

Thanks,
Dmitry.
