resyncing ... thanks :)

I will send in a few moments a first round for ipv6 taking into account ip6_fib.

There some other pending patches I will send, I hope before the end of the week.

I am a little lost with what we want to send for net-2.6.25. I mean we planned to send af_unix, af_packet, af_netlink, af_inet and af_inet6.

What is the level of functionality we want to provide with ipv4 and ipv6. For example we have addresss autoconfiguration for ipv6, shall we send it ?

What about the todo list Pavel planned to do ?
