resyncing ... thanks :)

I will send in a few moments a first round for ipv6 taking into account ip6_fib.

There some other pending patches I will send, I hope before the end of the week.

I am a little lost with what we want to send for net-2.6.25. I mean we planned to send af_unix, af_packet, af_netlink, af_inet and af_inet6.

What is the level of functionnality we want to provide with ipv4 and ipv6. For example we have addresss autoconfiguration for ipv6, shall we send it?

What about the todo list Pavel planned to do?
