Subject: Re: Networking? (NAT) Posted by RobinVossen on Thu, 15 Nov 2007 14:48:11 GMT View Forum Message <> Reply to Message

THanks for your support. But I think I am thick or something... I did run the following commands: vzctI start 1 iptables -t nat -A POSTROUTING -s 192.168.1.1 -o eth0 -j SNAT --to 192.168.42.112 After that I did run vzlist output: VPSID 1 NPROC 1 STATUS running IP_ADDR 192.168.1.1 HOSTNAME 1 Then I did vzctI enter 1 Now ping google.com (Error, unknown host google.com) Exit (to get to my main system) ping google.com (Success) ifconfig afterwards to check if I really aws 192.168.42.112. Output: eth0 inet addr:192.168.42.112

Bad Luck..

Were do I go wrong?
