Hi,

I've searched to resolve this problem for a long time ! So now, i decide to share it .

For a project I had to make a custom template with buildroot and busybox.

I created a VE and gave him an ip address ( venet interface )

(vzctl create 103 --ostemplate linux --ipadd 192.168.254.103)

Next inside that VE i configured my interfaces with this script :

```
#!/bin/sh
```

```
ifconfig venet0 add 127.0.0.1 netmask 255.255.255.255 broadcast 0.0.0.0 up
```

```
ifconfig venet0:0 add 192.168.254.103 netmask 255.255.255.255 broadcast 0.0.0.0 up
```

```
route add -net 191.255.255.1 netmask 255.255.255.255 dev venet0
```

```
route add -net default gw 191.255.255.1
```

From here, i can ping the HN but can't connect to him through a tcp socket.

I'd like to know i a forgot something, or made something wrong ?

Thanks a lot !
