Hi,

Thanks for the good news! I hope that you send the patches our way real soon now, so we can review and merge it.

As for the testing, I can think of two tests:

1. Run LTP (linux testing project) on both the host system and in a VE.
  2. Run start/stop test. The idea is to start and stop many VEs in parallel. You can write a simple shell script for that, I did once but it's lost now
