http://www.google.com/search?q=OpenVZ+lockedpages+unlock

didn't help at all. Can someone give me a hint how to get more information about the processes, that uses lockedpages, and how to unlock them, how to solve this issue?

The count of locked pages is yet increased to 251.

My Processlist looks now like this:
system: init syslogd klogd atd cron
database: mysqld_safe mysqld
webserver: apache
postfix: logger master qmgr pickup
shell: sshd su bash sh
monitoring: atop munin-node munin-cron munin-graph
